NEW DOUGLAS FIR BEAMS DESCRIPTION

Golden/Tan Douglas Fir Beams.

Douglas Fir is a common lumber for structural applications. Douglas Fir timbers are very stable and an excellent pick for any application. Green timbers are fresh cut and have not been seasoned. Over time they will dry out and in the process check and shrink somewhat. Add K.D. (for Kiln-Dry) or use Reclaimed to avoid this from happening.

OPTIONS & UPGRADES

- Kiln Dry—K.D. Option —Available upon request
- Surfaced 4 Side—S4S Option—Available upon request
- Distressed Option —Available upon request
- Hand Hewn Option—Available upon request
